1. INTRODUCTION

Welcome to TokenGlade, your gateway to token creation across multiple blockchains. What began as a specialized platform focused on Stellar token generation has now evolved into a broader mission: to make tokenization as simple as clicking a button, regardless of the blockchain you're on.

TokenGlade is a powerful, user-friendly token creation platform that enables anyone, from developers to entrepreneurs, to create custom tokens without writing a single line of code. With the rise of blockchainbased utility tokens, creating digital assets has become a critical need. However, the complexity of smart contracts, wallet setups & blockchain-specific tools still creates barriers. TokenGlade eliminates those barriers by abstracting away the technical complexities behind a seamless user interface.

Initially built on the Stellar blockchain, known for its low fees & fast transactions, TokenGlade is now expanding to support a range of blockchain networks, starting with Ripple & soon others. Whether you're creating a utility token for a community, launching a reward token for a game, or experimenting with programmable assets, TokenGlade provides the tools to make it happen.

2. VISION & MISSION

Our vision is to make blockchain token creation simple & accessible for everyone, allowing individuals & businesses to launch tokens across multiple blockchains without technical barriers.

Our mission is to remove the complexity from token creation by building a secure, intuitive platform that supports multiple blockchain networks. Starting with Stellar & soon expanding to Ripple & other, TokenGlade helps users launch & manage tokens with ease & confidence.

3. PLATFORM OVERVIEW

TokenGlade is a multi-blockchain token creation platform designed to simplify the process of launching digital assets. Initially built on the Stellar blockchain known for its speed, low fees & reliability.

TokenGlade now aims to expand & support to additional blockchains

The platform removes the need for deep technical knowledge by offering a simple interface where users can create & manage tokens with just a few clicks. Whether launching a project on Stellar or other supported

networks, TokenGlade provides a seamless experience for creators looking to enter the blockchain space efficiently.

4. KEY FEATURES

1. Token Creation Across Blockchains

TokenGlade allows users to create tokens on multiple blockchains with zero coding. Currently live on Stellar, the platform will soon support Ripple (XRP Ledger), followed by additional chains like Hedera (HBAR) as outlined in the roadmap. Each integration follows a seamless, click-based minting experience.

2. Non-Technical, Wallet-Based Interface

No blockchain knowledge required. Users only need to connect a supported wallet (like Freighter or Rabet for Stellar) to begin. After that, minting a token is as simple as filling in a few fields & clicking "Create." Mobile support & wallet options are also expanding.

3. Native Chain Fee System

Each blockchain uses its own native asset for fees, ensuring compliance & user familiarity. For example, token creation on Stellar requires XLM, while Ripple will require XRP. TokenGlade never forces crosstoken payments fees align with the chain in use.

4. KEY FEATURES

4. \$TKG Staking (Stellar Only)

Our native token, \$TKG, is not used for creation fees it's reserved for staking on Stellar. Users can stake \$TKG & earn daily rewards with a competitive APY. This staking model is designed to reward early adopters & support platform sustainability.

5. Expansion-Ready Infrastructure

TokenGlade has been fully restructured to support multi-chain tokenization. With Stellar live & Ripple next in line, future plans include Hedera & more. All upgrades will follow the same philosophy: make token

5. USE CASES FOR TOKENGLADE

Staking & Rewards

TokenGlade enables users to stake their \$TKG tokens & earn **daily rewards** through a **tier-based APY system**, encouraging long-term holding & ecosystem stability. Staking not only rewards users but also strengthens the TokenGlade network by promoting consistent participation.

Liquidity & Deflation Model

A portion of every token minting fee will be automatically added to the \$TKG–XLM liquidity pool, while a small percentage of \$TKG will be permanently burned, creating a self-sustaining & deflationary ecosystem. This mechanism is designed to ensure continuous liquidity growth, stronger price stability & long-term value appreciation for all token holders as the feature goes live.

6. TOKENOMICS

The TokenGlade Token (\$TKG) serves as the core utility & governance asset within the TokenGlade ecosystem. It powers platform transactions, staking rewards & liquidity growth. The tokenomics model is designed to ensure fair distribution, long-term sustainability & community-driven growth.

Total Supply 49,426,483 \$TKG (Fixed & Non-Inflationary)

No additional tokens will ever be minted, ensuring controlled supply & long-term value preservation.

6.1 DISTRIBUTION BREAKDOWN

Each category plays a vital role in supporting TokenGlade's growth, community incentives & platform development.

- **Total Supply:** 49,426,483 \$TKG
- **Staking – 70% (35,000,000 \$TKG)**
Reserved for staking rewards, distributed daily to incentivize long-term holding & participation.
- **Public Trading – 15% (4,426,483 \$TKG)**
Released for open-market trading & liquidity pool support.
- **Team – 10% (5,000,000 \$TKG)**
Allocated to the core development team to ensure ongoing growth & innovation.
- **Airdrop Rewards – 1% (500,000 \$TKG)**
Used for community giveaways, marketing & engagement campaigns.
- **Reserve – 4% (2,000,000 \$TKG)**

Held for partnerships, unforeseen requirements & ecosystem expansion.

6.2 TOKEN CHARACTERISTICS

The TokenGlade Token (\$TKG) is built on the Stellar blockchain & serves as the core utility asset powering the platform's ecosystem. It is designed to maintain transparency, security & long-term value through a fixed, non-inflationary supply model.

Type: Utility Token

- **Blockchain:** Stellar
- **Asset Code:** TKG
- **Total Supply:** 49,426,483 \$TKG
- **Supply Type:** Fixed (Non-Inflationary)
- **Contract Address:**

GAM3PID2IOBTNCBMJXHIAS4EO3GQXAGRX4UB6HTQY2DUOVL3AQRB4UKQ

6.3 ECONOMIC DESIGN

TokenGlade's economic model is structured to promote long-term sustainability, value appreciation & community participation. By combining liquidity growth, controlled deflation & incentivized staking, the \$TKG ecosystem ensures a stable & self-sustaining financial foundation.

The \$TKG economy is designed to remain balanced & deflationary:

- 70% of minting fees will be directed to the \$TKG–XLM liquidity pool to support sustainable market depth.
- 2% worth of \$TKG from every token mint will be permanently burned, gradually reducing the circulating supply over time.
- The staking program encourages holders to earn daily rewards while contributing to network stability.

7. STAKING & REWARDS

TokenGlade introduces a multi-tier staking system designed to reward active community members while ensuring the long-term growth & stability of the platform. By staking \$TKG tokens, users can earn daily

rewards based on their staking tier, making \$TKG not just a utility token but also a sustainable incomegenerating asset.

Tiered Staking Rewards

TokenGlade's tier-based APY system offers flexible earning opportunities tailored to different levels of participation:

- **Tier 1:** 1,500 – 9,999 TKG → **12% APY**
- **Tier 2:** 10,000 – 49,999 TKG → **15% APY**
- **Tier 3:** 50,000 – 99,999 TKG → **16% APY**
- **Tier 4:** 100,000+ TKG → **18% APY**

This structure encourages deeper participation by offering higher rewards to long-term & committed holders, strengthening both the liquidity base & token stability.

7. STAKING & REWARDS

Daily Rewards Distribution

Staking rewards are distributed daily, providing participants with a steady & transparent flow of earnings. This approach allows users to see tangible benefits from their contributions without waiting for long reward cycles, fostering ongoing engagement & trust in the ecosystem.

Sustainable Token Allocation

A significant 70% of the total \$TKG supply (35 million tokens) is reserved for staking rewards. This allocation ensures long-term sustainability & fairness, enabling consistent payouts without overinflating supply or compromising token value.

Empowering the Community

By staking \$TKG, users contribute to the growth, stability, & decentralization of the TokenGlade ecosystem. The user-friendly staking interface is designed to be accessible even to newcomers in blockchain, allowing everyone to participate easily & benefit from the platform's success.

8. LIQUIDITY & DEFLATION MODEL

TokenGlade's economic framework is designed to ensure long-term sustainability, stability & organic value growth for the \$TKG ecosystem. This model focuses on two core mechanisms, Automatic Liquidity Growth & Deflationary Token Burning, that work together to create a self-reinforcing, value-positive environment.

8.1 AUTOMATIC LIQUIDITY GROWTH

Every time a new token is minted through TokenGlade, 70% of the minting fees are automatically added to the \$TKG–XLM liquidity pool. This ensures that liquidity grows in direct proportion to platform adoption, meaning that as more users mint tokens, the pool deepens, creating a healthier & more stable market for \$TKG.

By continuously expanding the liquidity pool, TokenGlade enhances price stability, reduces slippage & strengthens overall trading efficiency across the Stellar DEX ecosystem. This mechanism eliminates dependency on external liquidity providers & establishes an autonomous liquidity cycle, where every new token creation contributes to a stronger & more resilient market.

8.2 DEFLATIONARY BURN MECHANISM

To maintain token scarcity & ensure long-term value growth, TokenGlade introduces a deflationary burn mechanism tied directly to token minting activity.

With each new token minted, 2% of the minting fees' equivalent value in \$TKG tokens is permanently burned. This process gradually reduces the total circulating supply of \$TKG, introducing a natural deflationary pressure over time.

As platform activity grows, more \$TKG tokens are burned, leading to increased scarcity & intrinsic value for holders. Unlike inflationary token models that rely on constant minting or external incentives, TokenGlade's deflationary approach creates sustainable upward value momentum while keeping the ecosystem economically balanced.

By combining automatic liquidity injection with a continuous burn process, TokenGlade ensures that both market depth & token value remain aligned with user growth, forming a self-regulating economy driven by genuine platform activity rather than artificial inflation.

9. ROADMAP

Q3 2025 – Initial Revamp & Launch

- Revamped TokenGlade vision focused on multi-blockchain token creation (Completed)
- Initial platform launch with Stellar blockchain integration (Completed)
- Rabet wallet integration (Completed)

Q4 2025 – Wallet, Liquidity & Ecosystem Expansion

- Integration of other Stellar wallets (Completed)
- Staking Module (Completed)
- Auto Toml File Creation While minting Token (Completed)
- 70% of Minting Fees Allocated to Liquidity Pool (Completed)
- 2% of Minting Fees worth of \$TKG Burned on Every Mint (Completed)

9. ROADMAP

Q1 2026 – Expansion to Ripple (XRP Ledger)

- Research & prepare token creation workflows for Ripple (XRP) blockchain (Completed)
- Start development for Ripple blockchain integration
- Users will be able to create tokens on the XRP Ledger
- Technical infrastructure setup for handling multi-chain environments
- Begin internal testing for Ripple token creation flow

Q2 2026 – Ecosystem Expansion

- Begin early planning for token swapping functionality
- Research & prepare token creation workflows for Hedera (HBAR) blockchain
- Community-driven improvements based on early user feedback

10. TEAM

TokenGlade is driven by a core team of innovators, developers & strategists who share a unified vision to simplify blockchain technology & make tokenization accessible to everyone. The team's combined expertise spans blockchain engineering, full-stack software development, UI/UX design & digital marketing, ensuring the platform's continuous evolution & reliability.

At the heart of TokenGlade's development is Syed Zain Haider, the Founder & Lead Developer, who brings years of hands-on experience in building scalable web platforms & blockchain-based applications. His deep understanding of decentralized ecosystems, coupled with a practical approach to usability & security, guides every aspect of TokenGlade's growth from architecture design to product strategy.

TokenGlade's long-term vision is supported by contributors & collaborators from across the blockchain community, who provide insights, feedback & technical support to strengthen the platform's foundation. This collaborative approach ensures that TokenGlade remains agile, forward-thinking & aligned with the evolving needs of the global crypto ecosystem.

11. CONCLUSION

TokenGlade stands as a testament to what can be achieved through passion, innovation & relentless focus on user empowerment. By combining technical excellence with a forward-thinking vision, the platform is paving the way for a new era of simplified tokenization where anyone, anywhere, can create & manage tokens with confidence.

The journey ahead is one of continuous growth & expansion, and TokenGlade remains dedicated to evolving alongside the blockchain ecosystem, building tools that inspire trust, unlock possibilities, & redefine how people interact with digital assets.
